

# Content Property (ASP.NET only)

This property is used to set/retrieve the content of a .net EditableSection control.

## Syntax

ASP.NET - EditLiveJava control

```
prefix:EditLiveJava Content="strContent"
```

ASP.NET - EditableSection control

```
prefix:EditableSection Content="strContent"
```

## Parameters

### strContent

A string specifying the initial content of the EditLive! applet.

The default value is an empty string.

## Examples

The following code would set the initial contents of EditLive! to be equal to *Initial contents*. The <P> and </P> tags will not be seen in the window as they will be parsed as HTML. However, these tags will be visible in the Code View.

ASP.NET EditableSection Control

```
<elj:EditableSection
  ...
  Content="<P>Initial contents</P>"
  ...
/>
```

 This property can be databound to ASP.NET data sources.
